15mm	-3400K	£3.71	£3.15

4 Way Manifold

Speedfit have introduced an innovative 22mm x 10mm 4 way manifold. Departing from the usual manifold design, this new product has 4 in-line 10mm outlets, offering a neater envelope size and therefore a much smaller installation space. Other benefits include better flow characteristics and a more even distribution of hot water. The 22mm and 10mm Speedfit push-fit connections make for a fast and easy installation, even in confined spaces. Whilst designed as a heating product, the manifold can also be used in a mains pressure hot or cold domestic plumbing system, to feed bathroom or kitchen taps and mixers. This allows for a more efficient installation as every terminal fitting has its own dedicated supply.

Super Seal Pipe Insert

The Superseal Pipe Insert has been developed to be used with Speedfit Barrier Pipe and Speedfit fittings to provide an extra line of defence when installing a Speedfit Push Fit System. The insert has its own 'O' Ring which, together with a Stem sliding within the pipe ID, gives a secondary seal against the inside of the fitting. The Speedfit connection, when made with the Insert, has a number of design features. Sliding the stem of the insert into the pipe gives greater compression of the main 'O' Ring on the pipe and greater rigidity of the length of pipe within the fitting, reducing the chance of leaks if a side load is applied. A connection is easier to make because the head of the insert has been designed for ease of insertion.
