OSAKI  **Combi Trimmer**

GTC 500
Ideal tool to access the places that mowers cannot reach, such as awkward corners of a lawn, around trees and against fence panels, gives your lawn edges and borders a perfect finish. The combi-trimmer has an edging facility so that you can trim the edges of flowerbeds and pathways too. Powerful 500W motor with an 11,000 rpm cutting speed. A generous 320mm cutting width fitted with a roller for border trimming which incorporates the 'Tap & Go' twin line feed system. In use the line will wear or even break when hitting a paving slab for example. The 'Tap & Go' system allows the spool to be tapped to release a new length of line when required by the user. The line feed spool is easy to replace which saves time. The main handle is angle adjustable and telescopic and has a safety trigger with finger guard. A support handle is also fitted which has an extra rubber grip for better control and user comfort. Supplied with 10m of 1.4mm trim line and 10m of cable.
1 year quality guarantee.
