Fixed Load Shifting Skates

For moving heavy objects. The load should be lifted using either a roller crow bar or a jack, so that the skates can be safely positioned under it. The larger diameter sealed bearing rollers ensure ease of movement and spread the load, protect floors from damage caused by high point loads or oil/grease contamination. The skates are maintenance free and are fitted with handles for ease of carrying and positioning. The platforms of the skates are fitted, with a rubber surface that helps grip and protect the object being moved.

Ratchet Load-binders

Quickly becoming the only load-binder to use, they are capable of tensioning a chain safely, they cannot spring open when in use and they do not open if the chain loses tension whilst in transit. When they are released there is no sudden release of pressure, as they do not spring open. Manufactured from drop forged heat treated steel with for extra strength and fitted with a quality easy action incremental ratchet. Supplied with a welded link and grab hook at both ends.
